

PHISHING AWARENESS TRAINING

● 1. Introduction to Phishing

What is Phishing?

Phishing is a cyberattack where attackers impersonate trusted entities to trick people into revealing sensitive information like passwords, bank details, or OTPs.

Why it matters

- Financial loss
- Data breaches
- Identity theft
- Organizational security risks

Common types

- Email phishing
- Spear phishing (targeted)
- Smishing (SMS)
- Vishing (voice calls)

HOW TO RECOGNIZE PHISHING EMAILS

Red Flags

- Suspicious sender address (e.g., support@paypa1.com instead of PayPal)
- Generic greetings (“Dear User”)
- Urgent or threatening language (“Your account will be locked!”)
- Unexpected attachments or links
- Poor spelling/grammar

What to Check

- Hover over links before clicking
- Verify sender domain carefully
- Look for inconsistencies in branding
- Check for unusual requests (passwords, OTPs)

IDENTIFYING FAKE WEBSITES

Signs of Fake Websites

- Slightly altered URLs (e.g., amaz0n.com)
- Missing HTTPS or security certificate
- Poor design or broken links
- Fake login pages asking for sensitive data

Safe Practices

- Type URLs manually instead of clicking links
- Use bookmarks for important sites
- Look for HTTPS (but don't rely on it alone)

SOCIAL ENGINEERING TACTICS

Attackers manipulate human psychology more than technology.

Common Tactics

- Urgency: “Act now or lose access”
- Authority: Pretending to be a boss or bank official
- Fear: “Your account has been compromised”
- Curiosity: “Confidential salary details attached”
- Greed: “You’ve won a prize!”

Example Scenario

An attacker pretends to be your manager asking for an urgent payment or sensitive file

BEST PRACTICES TO STAY SAFE

Do's

- Use strong, unique passwords
- Enable multi-factor authentication (MFA)
- Verify requests through official channels
- Report suspicious emails immediately

Don'ts

- Don't click unknown links
- Don't share OTPs or passwords
- Don't download unexpected attachments
- Don't trust messages blindly—even from known contacts

REAL-WORLD EXAMPLES

Example 1: Fake Bank Email

- Subject: “Urgent: Account Suspension Notice”
- Contains a link to a fake login page

Example 2: Delivery Scam

- Message claims a package is pending
- Asks for payment via a malicious link

Example 3: CEO Fraud

- Email appears from company executive
- Requests urgent fund transfer

SCENARIO-BASED ACTIVITY

Situation:

You receive an email from “IT Support” asking you to reset your password using a provided link.

What should you do?

- Check sender email carefully
- Do NOT click the link
- Contact IT through official channels

THANK YOU

STAY SAFE ONLINE!
